## Broadband Access

### What is Broadband (DSL)?

Broadband (DSL - Digital Subscriber Line) takes an ordinary phone line, and splits into the part used by voice or fax communication, and the unused portion. This unused part is then connected to the internet at the exchange, and provides a permanent, "always-on" connection at speeds of up to 1 megabit per second. That's about 25 times faster than downloading using a standard modem connection, and 8 times faster than the fastest ISDN connection.

The voice and fax part? It remains as it always was – you can continue to use the same line to make voice and fax calls.

### What are the advantages of 365 Business Broadband ?

- **Fixed monthly cost** – there are no call charges with 365 Broadband. You simply pay a fixed charge every month, and *all* of your internet access is free thereafter.
- **Speed** – using an ordinary modem, downloading a colour picture might take two minutes. With 365 Broadband, the same picture could be downloaded in *five seconds!*
- **Fixed IP Address** – this allows you to add services, firewalls, VPN tunnelling as and when you need them.
- **No more engaged tones** - you can use the phone as normal to accept incoming and outgoing calls *whilst you are surfing the internet!*
- **Multiple users** – you can have two, three, four, or even more computers sharing the same line at no extra monthly charge. You simply order hardware with enough ports to fill your requirements. (Please see order form for details.)
- **No new telephone line** – 365 Broadband can usually be installed on an existing phone line, so you don't have to wait for another line to be installed
- **Instant access to e-mail** – because the 365 Broadband service is "always-on", you are always connected to your mail server, so when mail arrives, it's in your mailbox immediately!
- **No download capacity limits** - We don't restrict you to monthly caps, so no unexpected extra bills!
- **One Service, One Contact** – we provide you with your own contact for *all* of your internet needs, whether it be mail, access, hosting, domains, or any of the other services 365 provides.
- **Easy web hosting integration** - for just €10 extra per month, upgrade your solution to include 100Mb of fully featured Unix webspace, more than ample for a serious web presence!
- **Quality**  
Quality is the key component of the 365 Business Broadband service. We provide you with a connected, working line, which allows you to instantly search the internet or collect mail 24 four hours a day, 365 days a year. And we have support staff who are on hand should you need additional help with your connection.
- **Consistency**  
Broadband from 365 utilises the existing telephone network. Telephone networks are among the most robust and reliable networks, only very rarely experiencing downtimes. Therefore you have the benefit of one of the most reliable networks available ensuring your connection consistency.

### Recommended Hardware Option

**Full Rate ADSL Modem Router - Integrated 4 port 10/100Mbps switch with firewall function.**

Ideal for small office networks, allowing multiple pcs or switches to connect to the broadband service. Perfect for our Business and Pro services. Supports NAT, DHCP, Firewall, Web Management and much more. Comes fully configured shipped direct from 365. Highly Recommended.
