

# | Virtual Private Servers - VPS

Virtual Private Servers, or VPS, allow a highly-redundant, high-performance server to be split between multiple customers, each of whom receive a fully independent 'slice' of the physical device.

The benefits of dedicated hosting on highly redundant hardware, without the associated costs! Run Linux distributions, run your own web or email server or applications, with this package you have complete independence.

## **Complete Root Access**

Virtual servers have their own root accounts and root directories in sub-directories of the main server, which gives:

- ability to install and run its own application software
- ability to manage own config files
- ability to configure/modify root application software
- ability to delete, add, modify any file, including files in the root server
- full control over all files and processes on the virtual server

## **Full-Featured System Administration as of a Physical Server**

Like physical servers, virtual servers have:

- multiple users and groups
- own user and group quota
- own crontab
- own chkconfig settings

## **Complete Independence**

Virtual private servers are completely isolated from each other and from their main physical server. Each VPS has:

- complete isolation of virtual server processes, even from the root server
- independence from underlying hardware: virtual servers can be easily moved to another physical server

## **Own Network Configuration**

Each VPS has its own network settings including:

- own private localhost network interface
- virtual ethernet devices configuration
- multiple IP addresses added without downtime
- IPs assigned to own virtual network adapters
- own hostname
- own domain name
- own routing tables
- ability to configure own DNS servers

Additional RAM is available @ 2c per MB per month

Additional Disk Space is @ 1c per MB per month

Additional Processes are 2c per Process per Month

Additional Transfer is € 4.95 per GB

Additional IP Addresses are €19.95 set-up and €4.95 per month.

You can upgrade the RAM in 64Mb increments at a cost of € 20 per month per 64MB.
