Anti-Virus & Anti-Spam

Hosting365.ie Antivirus is a fully managed and automated system that protects email users from viruses and inappropriate content by scanning and monitoring the email traffic.

What is NetCleanse?

NetCleanse is an intelligent anti-spam and anti-virus system for business e-mail. NetCleanse learns what e-mails we want, and what spam we don't want.

It's simple to use, and guarantees that no e-mails will go astray.

How does it work?

You don't have to learn new software or install anything. NetCleanse automatically diverts mail that seems like spam.
NetCleanse will send you an Aggregate Report of all quarantined mail. Releasing a message is as easy as 1-2-3.

> Each item in the **Aggregate Report** can be released by clicking the button next to it marked **Release.**
> You'll be asked to **Confirm** this release
> The mail you selected for release will be delivered to your inbox within 15 minutes.

*That's it.* Report…Release….Confirm

What to expect

Some messages are obviously spam because of, among other things, key words in the text. Each spammy characteristic has a point value. Messages with many points get quarantined. (Alternatively, words with "good" points are given positive scores, and are delivered to you.) However, legitimate incoming e-mails can sometimes seem like spam because of words and punctuation. This is what the Aggregate Report is for. It gives you the control to *teach* NetCleanse what mails you want.

System Features
- Denial of Service Security Protection
- IP Block List
- Rate Controls
- Two Layers of Virus Protection
- Updated every 10 minutes, 24/7

Spam Blocking Rules
- User Specified Rules
- Spam Fingerprint Check
- Spam Scoring
- Bayesian Analysis

This process is completed before your email before it gets to your company email server or inbox.

By using a combination of technologies and scan criteria Hosting365.ie Antivirus is not governed by a single scan criteria allowing different analysis of the same code (e.g. heuristics, pattern matching etc) giving a comprehensive breakdown of every email. This mix of technologies will afford you a greater resilience against known and unknown viruses. The entire system is pro-actively managed, with Anti-Virus and Anti-Spam updates applied on an hourly basis.

How can I get Hosting365.ie Antivirus protection?

Contact sales@hosting365.ie or call us on 1800 365 965 to activate. We need your domain name, and payment details.

Set-Up: € 19.95
